What is a Flatbed Applicator?

A flatbed applicator is a machine that enables you to apply material, whether vinyl, laminate or other onto different substrates. It is most commonly used for applying vinyl onto different signage materials like Foamex, Correx and Dibond but ultimately it will apply anything for you. We have customers who use it to apply onto glass, wood and even one customer who uses it solely for applying application tape onto contour cut vinyl.

The beauty of the flatbed applicator is how easy they are to use, the accuracy that they provide and how much time and waste that they save. It operates using a pneumatic roller and therefore enables a consist level of pressure over the whole bed. Thus meaning that you are able to have a perfect application every time as the process becomes automatic rather than manual and so no mistakes occur!

Why we sell the Rollover Flatbed Applicator.

Like any machine, there are normally a few manufacturers and in the case of the flatbed applicator that is the same. At Signmaster we have chosen to sell the Rollover Flatbed Applicator, because it is the premium product and brand within its market, making alternatives seem inferior. Rollover are based in Norway and their precision engineering have resulted in the most sturdy, durable and reliable machine in its class.

The Rollover also comes in numerous different bed sizes and therefore offers great choice for our customers, from the smallest bed size of 3m x 1.4m to the largest of 8m x 1.7m.

The Rollover also comes with 5 years warranty and so offers fantastic value for money over other brands who only supply with 1-3 years. They are built to last and providing a 5 year warranty is testament to that.

The Difference between the Rollover Classic and the Rollover Flexi

Roller Classic

The Rollover classic is the original line of flatbeds, made with a high level of quality, craftsmanship and durability and available in a range of different sizes, including:

- 3m x 1.4m
- 3m x 1.7m
- 4m x 1.4m
- 4m x 1.7m
- 6m x 1.4m
- 6m x 1.7m
- 8m x 1.4m
- 8m x 1.7m

The classic model also enables customers to upgrade the roller to a heated roller.

Rollover Flexi is the new, flexible addition to the Rollover Range. The bed is exactly the same as the classic and shares all the essential qualities of the existing line of Classic models. The stand is designed differently to accommodate quick dismantling in-order to facilitate entering of premises having difficult access.

The flexi is one size only, which is slightly different to the 'classic' and has a bed of 3.36m x 1.55m. The Flexi is the most popular model within the Rollover range, because of its price point, ability to handle 10 x 5ft boards and it can be broken down for tight installations.
